ROLL-OFF TARP SYSTEM

SWAT[®] is a fully adjustable automatic tarping system for 15 to 40 cubic yard containers. Designed with the end user in mind, the SWAT[®] was engineered to surpass all established technologies in the industry, thereby delivering maximum uptime and safety at a competitive price.

BUILT TO BE THE BEST

Gear and Rack

Precision-cut/built gear and rack ensures smooth, synchronous arm movement as intended. Eliminates gear slippage and pivot arm twisting. Increased longevity/decreased downtime.

Flanged & Bolted Gear Pin

A flanged gear pin is bolted to the pivot housing. This prevents pin loss and enhances pivot arm security and smooth rotation.

Bolt-Less Tarp Attachment

A high-quality roller bar design allows for fast and secure tarp attachment. Durable bearings contribute to longer service life. Three attachment options include spline, square nut and threaded slot.

ADDITIONAL FEATURES

Hard-Pipe Cylinders

—The hard-pipe cylinders with nitride coated rods reduce chances of hose damage.

Mighty Mesh[®]

—The strongest truck tarp material on the market today.

LiteALL[®] (Option)

—Durable light with diecast aluminum housing.

Floodlight Mounting Brackets

—Gantry light mounting brackets and wiring protection tube are pre-installed.

Tower Mount Plates

—Wider tower mount plates fit more hoist configurations, cutting down on installation time.

BENEFITS

—SWAT[®] replacement parts are completely compatible with competitor rack and pinion system parts .

—Powder-coated parts provide premium finish and protection.

—3/16" A500B steel arms, gussets and brackets engineered with exceptional durability to withstand demands of the industry.

—**Low-profile arms** avoid damage from wide containers and compactors.

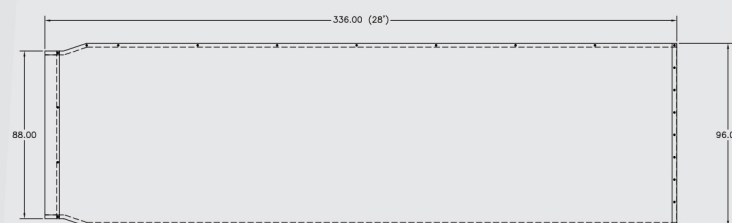

—Quick-release tarp tube and standard tarp spline make tarp replacement a quick and easy, 1-person job.

Self-Contained Remote

The SWAT[®] is now available with a new self-contained remote control, making it the only steel-arm pivot tarp system in the industry with a remote control option. The remote allows drivers to take safer positions with better visibility during tarp operation. Additionally, the self-contained design isolates the tarp's hydraulics, protecting the tarp system from debris or other possible contamination from the truck's hydraulics.
